FORM ALIGNMENT: BONUS PART-USING A WOOD SILL

FORMS CAN BE SET DIRECTLY ON THE CONCRETE FOOTING TO A CHALK LINE, BUT A LUMBER PLATE IS RECOMMENDED BECAUSE THEY PROVIDE POSITIVE ON-LINE WALL PATTERN, LEVELS OUT ROUGH AREAS ON THE FOOTING, AND FORMS CAN READILY NAILED TO LINE. A LUMBER SILL SHOULD BE USED IN SITUATIONS WHERE A FOOTING IS NOT USED, TO GAIN EXTRA HEIGHT (DOUBLE 2X4) AND ALSO CAN BE USED TO SPAN CONCRETE PIERS WHEN FORMING GRADE BEAMS.
